

FORENSIC PUBLIC INTEREST DISCLOSURE

COMPLETE EVIDENTIARY RECONSTRUCTION

Barran Dodger Archive — Consolidated 7 October 2026

PURPOSE AND STATUS

This report consolidates the forensic reconstruction developed from the public Barran Dodger archive into one continuous evidentiary document. It is an analytical reconstruction, not a judicial determination or legal opinion.

Critical limitation: the archive contains documentary records, testimony, allegations, interpretations, duplicate copies and metadata. A document establishes the existence of the document; it does not automatically establish the truth of every statement within it. Where a primary binary record requires direct verification, the proposition remains qualified.

Core principle: Preserve the evidence. Preserve the testimony. Make the record public. Let the evidence be examined.

1. EXECUTIVE FINDING

The archive presents a substantial, inspectable documentary record concerning public administration, PID activity, complaints, FOI processes, compensation matters, disability administration, housing/support consequences and later disputes.

The strongest public-interest proposition is not that every allegation has already been proved. It is that the record contains identifiable disclosures, institutional responses, administrative decisions, subsequent detriments and unresolved discrepancies that can be independently tested.

The central forensic question is whether individual decisions and omissions, taken separately or together, establish maladministration, failures of protection, unlawful reprisal, other disclosable conduct, or lawful/independent explanations.

2. FORENSIC METHODOLOGY

Evidence levels: A — documented fact; B — corroborated claim; C — documented allegation; D — inference; E — interpretation; F — unresolved.

Core test: CLAIM → IDENTIFY → SOURCE → DATE → ACTOR/INSTITUTION → PRIMARY RECORD → CORROBORATION → CONTRADICTION/LIMITING EVIDENCE → OFFICIAL RESPONSE → FINDING STATUS → LEGAL FRAMEWORK → CONSEQUENCE → VERIFICATION → PRESERVATION.

Unit of analysis: INDIVIDUAL DECISION → INSTITUTION → DOCUMENTARY BASIS → IMMEDIATE EFFECT → NEXT INSTITUTIONAL RESPONSE → CUMULATIVE CONSEQUENCE → CONNECTION EVIDENCE → ALTERNATIVE EXPLANATION → CURRENT STATUS.

Temporal sequence is not, by itself, proof of coordination or causation. Institutional knowledge should be stated narrowly: who received what, when, and whether the relevant decision-maker acknowledged or acted upon it.

A missing record is not automatically evidence of destruction or deliberate concealment.

3. ARCHIVE SCALE AND PROVENANCE

The public repository contains government correspondence, legal and administrative records, statements, research, evidence material, source text, rendered documents and archival metadata.

The 4 October 2026 dataset changelog reports 3,215 unique complete PDFs, 3,667 unique PDF blobs including stubs, 10,001 PDF instances including mirrors, 21,197 archive-path file instances excluding node_modules, 8,819 unique archive-path blobs, files in 8 repositories and 3 empty repositories examined.

These are dated inventory measurements from particular methods. Earlier figures remain historical inventory claims and should not be silently added together. Duplicate copies are not independent corroboration.

The 20 September 2026 official-drive manifest contains 48 specifically downloaded PDFs and agency-letter attachments. That is a defined manifest count, not the total archive and not the later folder inventory.

4. PRIMARY DOCUMENTARY RECORD

Identifiable records concern, among others, IBAC, OAIC, NDIA, Comcare, the Commonwealth Ombudsman, NDIS Quality and Safeguards Commission, ASBFEO, APRA, AAT/ART, the Victorian Ombudsman, police, AHRC, the Attorney-General's Department and PM&C; FOI.

The archive contains PID-related material involving the Commonwealth Ombudsman, IBAC, APRA/OAIC and the Federal Court, together with compensation, FOI, administrative review and disability-administration records.

Original files should control over later summaries. Filename labels such as "rejection" or "not-an-employee" are archive labels unless the same wording is verified inside the issuing document.

5. PID CHRONOLOGY

The archive identifies a PID directed to the Federal Court and an assessment attributed to Scott Tredwell, General Counsel, identified by the archive as dated 27 March 2023.

The Federal Court PID page attributes to that assessment a statement concerning DSS employment and observations concerning alleged corruption, maladministration and danger to health or safety. These are documentary leads and should not be represented as judicial findings.

The machine-readable events dataset warns that some dates are filename-derived and therefore not verified event dates. The primary document controls where there is a discrepancy.

The archive also identifies PID-related material involving the Commonwealth Ombudsman, IBAC and APRA/OAIC, including acknowledgement, rejection, assessment and review records.

6. CONTRADICTION REGISTER

Employment/status: an NDIS-related filename describes a "not-an-employee" position while later Federal Court PID material reproduces a statement concerning DSS employment. This is an apparent contradiction requiring comparison of the actual documents, dates, statutory definitions and employment relationship.

Comcare identifiers: records include claim 1326583 and a filename containing 13265831. This is presently a document-identity discrepancy, not proof of contradiction.

APRA: October and November 2021 records presently appear to form a sequence rather than an established contradiction.

IBAC: multiple case numbers across years do not establish that all matters were the same complaint. Cross-references must be tested.

Ombudsman: receipt, acknowledgement, allocation, rejection and investigation are different procedural stages.

Duplicates: repeated copies of one underlying document do not constitute independent corroboration.

7. NOTICE REGISTER — "WHAT DID THEY KNOW?"

The correct question is not simply whether "the government knew". It is: which institution received which disclosure, on what date, containing what information, and did the relevant decision-maker actually receive or consider it?

The strongest knowledge proposition is documentary and specific: Institution A received Document X on Date Y; Officer B acknowledged or acted upon it; Decision C followed.

Potential knowledge chains identified in the archive include Commonwealth Ombudsman, IBAC, APRA/OAIC, Federal Court and Comcare interactions. Each must be reconstructed independently.

8. DETRIMENT REGISTER

Potential detriment categories include financial loss, housing instability, professional consequences, reputational consequences, psychological/physical harm and restrictions affecting services or support.

Each detriment must be tied to an actual event rather than inferred from general chronology.

The causal sequence is: DECISION → DOCUMENTED CONSEQUENCE → DATE/AMOUNT → CAUSAL EVIDENCE → ALTERNATIVE EXPLANATION.

A later adverse circumstance does not automatically prove that an earlier disclosure caused it.

9. ACCOUNTABILITY GAP REGISTER

For each significant disclosure, establish: what was reported; who received it; what duty or power existed; what action was taken; what was not done; what record explains the omission; what consequence followed; and whether the omission warrants investigation.

Classify omissions carefully: no evidence of omission; unexplained omission; documented failure to act; deliberate omission supported by evidence of knowledge and intentional non-action.

The Federal Court PID process is a particularly important comparison because official Federal Court PID policy describes authorised-officer responsibilities concerning assessment and handling of disclosures.

10. INSTITUTIONAL ACCOUNTABILITY TESTS

Federal Court: compare the actual PID, assessment, allocation/investigation decision, reasons and protection assessment.

Commonwealth Ombudsman: compare receipt, classification, allocation/non-allocation, reasons, notification, investigation/referral and outcome.

IBAC: separate each case by number, subject matter, jurisdiction, assessment, reason and referral.

APRA/OAIC: compare information submitted with information actually considered in the response.

Comcare/ART: compare claim, employment status, evidence considered, determination, reasons and review outcome.

NDIS/disability administration: distinguish ordinary administrative review from alleged reprisal and trace each decision to its documentary basis and actual consequence.

11. LEGAL TEST — PID REPRISAL

The Public Interest Disclosure Act 2013 (Cth) provides the central Commonwealth reprisal framework. The relevant test requires detriment or threatened detriment, a belief or suspicion concerning a PID, and that belief or suspicion being a reason or part of the reason for the conduct.

Detriment includes categories such as harassment or intimidation, psychological harm, property damage, reputational damage, financial/business damage and other damage.

The forensic sequence is therefore: DISCLOSURE → KNOWLEDGE/SUSPICION → CONDUCT → DETRIMENT → REASON/PART-REASON → CAUSATION.

Temporal proximity alone is not sufficient. The causal link must be supported by evidence.

12. MONEY, SERVICES AND HOUSING

Financial figures should not be aggregated into a damages claim until every amount is tied to a source document, decision and causal event.

Housing instability should be reconstructed through separate records concerning accommodation, tenancy, funding, support, payments, notices, displacement and subsequent assistance.

Service decisions should be traced from plan or administrative decision through review and actual outcome.

Severe consequences are important evidence of detriment but do not, by themselves, establish unlawful conduct.

13. REPRISAL AND CAUSATION TEST

For any alleged reprisal ask: Was there a qualifying disclosure? Did the relevant person know or suspect it? Was there subsequent conduct? Did it cause or threaten detriment? Was the disclosure a reason or part of the reason? Is there evidence connecting the disclosure to the conduct?

Useful connecting evidence includes explicit references to the disclosure, contemporaneous communications, instructions, shared records, unusual procedural departures, admissions, synchronized actions or other independent evidence.

Alternative explanations must be recorded: ordinary administration, jurisdictional limitation, resource constraints, independent clinical decision-making, data error, identity confusion, incomplete information, lawful discretion or unrelated events.

14. MASTER EVIDENCE MATRIX

K-001 — Federal Court PID: documented archive lead; primary assessment and procedural outcome require direct verification.

K-002 — Commonwealth Ombudsman PID sequence: documented institutional contact; allocation, reasons and outcome require reconstruction.

K-003 — IBAC records: multiple documented matters; relationship between cases unresolved.

K-004 — APRA/OAIC material: documented correspondence; information flow and decision rationale require comparison.

K-005 — Comcare claim/determination: documented administrative process; evidence considered and consequences require primary-record analysis.

K-006 — NDIS/support administration: substantial documentary material; each decision must be separated and independently assessed.

D-001 — financial detriment: potentially material; causal attribution must be established decision-by-decision.

D-002 — housing detriment: potentially material; causal attribution must be established decision-by-decision.

C-001 — employment classification discrepancy: apparent contradiction, unresolved pending primary comparison.

15. WHAT THE RECORD SUPPORTS

The archive establishes the existence of a substantial documentary record and numerous interactions with government and administrative institutions.

It supports construction of a testable chronology involving disclosures, institutional responses, administrative decisions, reviews and later adverse circumstances.

It identifies apparent documentary discrepancies and unresolved questions suitable for primary-record comparison.

It provides material from which notice, procedure, detriment and causation can be investigated.

16. WHAT THE RECORD DOES NOT YET ESTABLISH

It does not, from archive existence alone, establish a single coordinated government conspiracy.

It does not establish that every adverse event was caused by whistleblowing.

It does not establish that every official knew the contents of every disclosure.

It does not establish that every rejection or administrative decision was retaliatory.

It does not establish that every allegation in a complaint or statement is true.

It does not establish a final legal finding where no competent authority has made one.

17. FINAL PUBLIC-INTEREST DISCLOSURE

This record should not be presented as proof that every allegation is true. Its public-interest significance is that it contains identifiable disclosures, government responses, administrative decisions, reviews, competing classifications, subsequent detriments and unresolved documentary questions capable of independent examination.

The appropriate public-interest question is whether the primary records, considered chronologically and institutionally, establish failures of administration, failures of protection, unlawful reprisal, maladministration or other disclosable conduct — and, where they do not, what remains unresolved and why.

The standard is not belief. It is inspectability.

A document is a document. An allegation is an allegation. A finding requires evidence and proper determination.

The strongest conclusion never exceeds the weakest material link required to support it. Where a link is missing, the missing link should remain visible rather than being replaced by inference.

18. PRESERVATION DIRECTIVE

Preserve original files, filenames, repository paths, hashes where available, Git commits/blobs, timestamps, source identifiers and version history.

Preserve contemporaneous records separately from later interpretations.

Do not count duplicate mirrors as independent corroboration.

Do not silently remove, shorten, redact or replace source material when maintaining the evidentiary archive.

Maintain a clear separation between documentary existence, substantive content, corroboration, official finding, allegation and interpretation.

APPENDIX A — STATUS SUMMARY

Category	Status
Archive existence	Documented
Large documentary dataset	Documented by archive inventory methodology
Government/PID correspondence	Documented archive material
Federal Court PID assessment	Documented archive lead; primary binary verification required
Employment-status discrepancy	Apparent / unresolved
Comcare identifier discrepancy	Unresolved document-identity issue
Institutional notice	Partly documented; decision-maker-level knowledge requires tracing
Detriment	Material circumstances documented/claimed in archive
Reprisal causation	Unresolved pending decision-by-decision evidence
Coordinated scheme	Not established by this reconstruction
